What is Laser Hair Removal?

Laser hair removal is an FDA (The Food and Drug Administration in the USA) approved permanent hair reduction technique, using light energy which provides fast and effective long-term hair removal results on the face or body.

Suitable for **all skin types**, **men** & **women**.

At Simply Laser Hair Removal, we use the most advanced medical grade Cynosure Elite + laser hair removal technology providing highly effective permanent hair reduction results for the face and body. Our fully qualified laser hair removal specialist has many years of experience which means successful hair reduction for men and women of any skin type.

What is a Patch test?

A patch test is part of the consultation process, we test small areas of skin prior to treatment to establish a client's sensitivity and/or suitability for laser hair removal. On your consultation day your hair and skin will be analysed by your laser therapist and a couple of laser test shots will be applied to the treatment area. Treatment can start 48 hours after your laser patch test. You can book your free patch test in **here**.

Laser Hair Removal Consultation

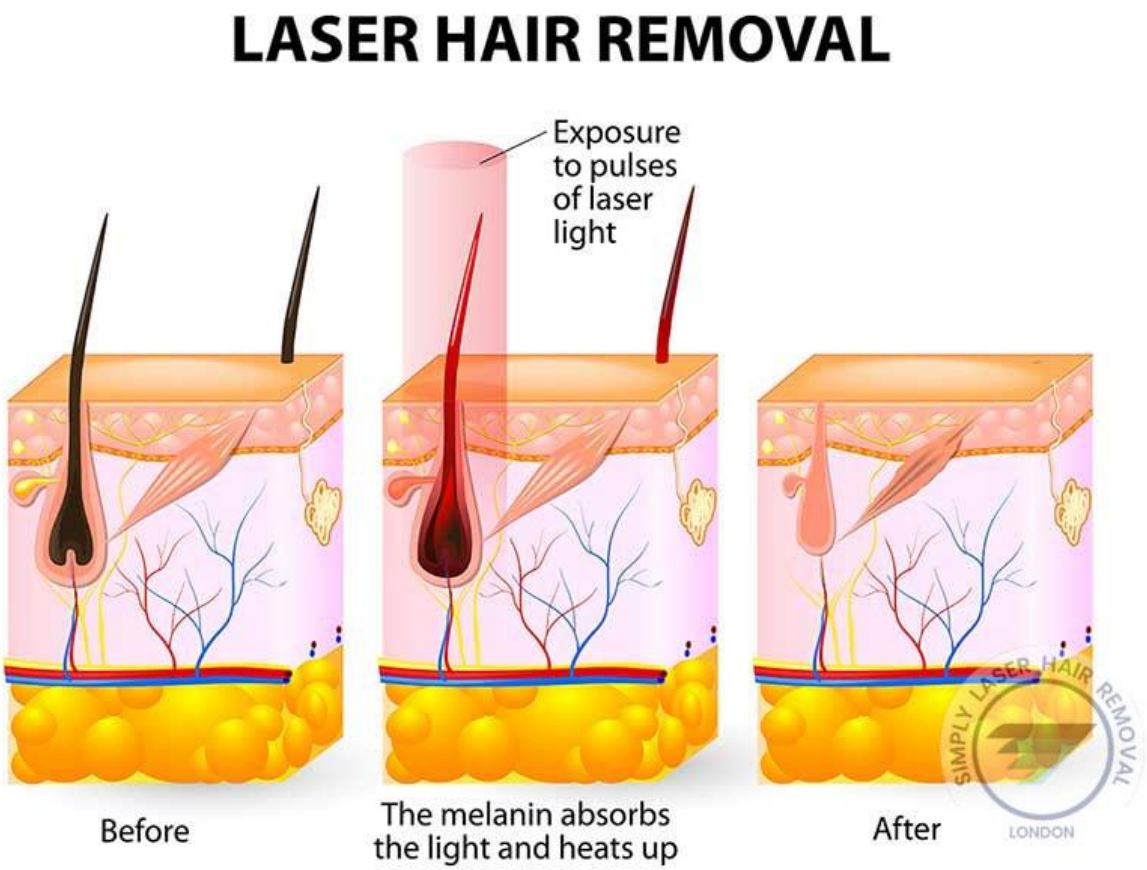
Every treatment starts with a consultation at Simply Laser Hair Removal. Consultations allow us to find out client's suitability for laser hair removal.

- On your consultation day we will ask you to fill out a small form including a little bit about your medical history.
- Our experienced and qualified laser therapist will assess the treatment area, your skin and hair.
- Apply a small patch test to work out sensitivity and/or suitability.
- Talk through the laser hair removal procedure, aftercare, and price.
- Give plenty of time to answer all your laser hair removal questions.

How Does Laser Hair Removal Work?

Laser hair removal treatment is a non-invasive medical procedure, the concentrated light (laser beam) is absorbed by the hair melanin (dark colour) and converts to heat energy.
The heat reaches the hair root and safely destroys the unwanted hair follicle leaving the surrounding tissue and skin unharmed.

However, laser light can destroy hair follicles only in their anagen phase (growing stage). Not all of your hairs are in anagen phase at one time, so to get an effective hair reduction it requires a series of laser hair removal treatments to catch the full hair growth cycle.
For the very best hair reduction results we suggest a minimum course of 6 to 8 treatments to see a satisfying hair reduction result.
***Results may vary for individual**



What are the Benefits of Laser Hair Removal?

- Compared with other hair removal systems, such as waxing or shaving, laser hair removal gives you long lasting permanent hair reduction and is much cheaper in the long term.
- Laser hair removal is very convenient; you can have a treatment on your lunch break. Treatments can take as little as 15 minutes, such as underarms.
- There is no down time, you can continue your daily life straight after the treatment.
- Large areas can also be treated such as Full Legs, Full Back, Chest & Abdomen at one time.
- Anybody can get the benefits of laser hair removal treatments, men, women, transgenders and female clients who are suffering from Polycystic Ovary Syndrome (PCOS).

- Laser hair removal improves your skin condition and texture as the laser beam heats the lower layer of dermis and stimulates the collagen production without unharming the skin.
- Say goodbye to ingrown hairs and ingrown hair scars with medical grade Laser Hair Removal treatment.
- Depending on the individual, you can get up to 90% permanent hair reduction.
- A course of laser hair removal could save your valuable time. Instead of spending your time with painful waxing or irritation as a result of shaving you can use your time in much better ways.

Laser Hair Removal Price

Laser Hair Removal pricing starts as little as **£35** for a single session.

- Free consultation and patch test
- Interest free in-house payment plan.
